

Worcester University Access Ramp

Following a successful tender process Serfis were delighted to be awarded the Access Ramp works at St Johns Campus.

The scope of works included excavation, foundations and brickwork. Also installation of slabbed ramp and a low level handrail.

The site was located within the university grounds and only allowed pedestrian access. All materials and waste had to be carefully handled with total safety to students and staff in mind. Despite the site challenges, the project was delivered on time and to the satisfaction of the university.
